## **Robotics and Automation in the Food Industry: Current and Future Technologies (Woodhead Publishing Series in Food Science, Technology and Nutrition)** From Woodhead Publishing

The implementation of robotics and automation in the food sector offers great potential for improved safety, quality and profitability by optimising process monitoring and control. Robotics and automation in the food industry provides a comprehensive overview of current and emerging technologies and their applications in different industry sectors.

Part one introduces key technologies and significant areas of development, including automatic process control and robotics in the food industry, sensors for automated quality and safety control, and the development of machine vision systems. Optical sensors and online spectroscopy, gripper technologies, wireless sensor networks (WSN) and supervisory control and data acquisition (SCADA) systems are discussed, with consideration of intelligent quality control systems based on fuzzy logic. Part two goes on to investigate robotics and automation in particular unit operations and industry sectors. The automation of bulk sorting and control of food chilling and freezing is considered, followed by chapters on the use of robotics and automation in the processing and packaging of meat, seafood, fresh produce and confectionery. Automatic control of batch thermal processing of canned foods is explored, before a final discussion on automation for a sustainable food industry.

With its distinguished editor and international team of expert contributors, Robotics and automation in the food industry is an indispensable guide for engineering professionals in the food industry, and a key introduction for professionals and academics interested in food production, robotics and automation.

- Provides a comprehensive overview of current and emerging robotics and automation technologies and their applications in different industry sectors
- Chapters in part one cover key technologies and significant areas of

development, including automatic process control and robotics in the food industry and sensors for automated quality and safety control

- Part two investigates robotics and automation in particular unit operations and industry sectors, including the automation of bulk sorting and the use of robotics and automation in the processing and packaging of meat, seafood, fresh produce and confectionery

### **Editorial Review**

#### Review

"This book provides a comprehensive overview of current and emerging technologies and their applications in different industry sectors. The structuring of the book to first consider the different aspects of the technologies separate from the practical applications works well in providing a very readable text in what is a complex subject area. The editor and authors are drawn from a wide range of international experts from universities, research institutes and process control and robotic suppliers. The book is likely to be most valued as a background reference for engineering professionals in the food industry and its equipment and process control suppliers, and as a key introduction for academics interested in food production, robotics and automation." --**International Journal of Dairy Technology**

#### About the Author

*Professor Darwin Caldwell* is the award-winning Research Director at the Italian Institute of Technology in Genoa, Italy and a visiting professor in the Department of Automatic Control and Systems Engineering at the University of Sheffield, UK. Currently Chair of the IEEE Robotics and Automation Chapter (UKRI), Professor Caldwell has both edited and published extensively in the field.

### **Users Review**

#### **From reader reviews:**

##### **Armando McFarland:**

The book *Robotics and Automation in the Food Industry: Current and Future Technologies* (Woodhead Publishing Series in Food Science, Technology and Nutrition) can give more knowledge and also the precise product information about everything you want. Why must we leave the good thing like a book *Robotics and Automation in the Food Industry: Current and Future Technologies* (Woodhead Publishing Series in Food Science, Technology and Nutrition)? A number of you have a different opinion about guide. But one aim which book can give many facts for us. It is absolutely suitable. Right now, try to closer together with your book. Knowledge or facts that you take for that, you could give for each other; you can share all of these. Book *Robotics and Automation in the Food Industry: Current and Future Technologies* (Woodhead Publishing Series in Food Science, Technology and Nutrition) has simple shape nevertheless, you know: it has great and large function for you. You can appearance the enormous world by start and read a publication. So it is very wonderful.

##### **Vicky Gamez:**

Your reading 6th sense will not betray an individual, why because this *Robotics and Automation in the Food Industry: Current and Future Technologies* (Woodhead Publishing Series in Food Science, Technology and Nutrition) e-book written by well-known writer we are excited for well how to make book that could be understand by anyone who all read the book. Written with good manner for you, dripping every ideas and producing skill only for eliminate your hunger then you still question *Robotics and Automation in the Food Industry: Current and Future Technologies* (Woodhead Publishing Series in Food Science, Technology and

Nutrition) as good book not only by the cover but also through the content. This is one book that can break don't evaluate book by its handle, so do you still needing a different sixth sense to pick this particular!? Oh come on your reading sixth sense already alerted you so why you have to listening to an additional sixth sense.

**James Wood:**

Are you kind of busy person, only have 10 or perhaps 15 minute in your day time to upgrading your mind expertise or thinking skill perhaps analytical thinking? Then you are experiencing problem with the book than can satisfy your small amount of time to read it because this all time you only find book that need more time to be go through. Robotics and Automation in the Food Industry: Current and Future Technologies (Woodhead Publishing Series in Food Science, Technology and Nutrition) can be your answer as it can be read by anyone who have those short time problems.

**Elizabeth Acker:**

Reading a book to become new life style in this calendar year; every people loves to read a book. When you read a book you can get a great deal of benefit. When you read publications, you can improve your knowledge, since book has a lot of information in it. The information that you will get depend on what forms of book that you have read. In order to get information about your study, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this kind of us novel, comics, along with soon. The Robotics and Automation in the Food Industry: Current and Future Technologies (Woodhead Publishing Series in Food Science, Technology and Nutrition) will give you a new experience in reading a book.
