Arboriculture: Integrated Management of Landscape Trees, Shrubs, and Vines (4th Edition) By Richard W. Harris Professor Emeritus, James R. Clark, Nelda P. Matheny

Regarded by many as an irreplaceable reference tool, this book describes the integration of the landscape environment (climate, soil, and related organisms), its effect on landscape plants, and how to manage both to obtain the desired results with reasonable effort. All aspects of tree, shrub, and vine care are covered, including plant structure and function, plant selection, site analysis and preparation, environmental influences on growth, soil, water and nutrient management, pruning, transplanting, and plant health care. A valuable handbook for professionals, including arboricultural consultants, arborists, urban foresters, landscape architects, landscape contractors (installation and/or maintenance), state and county horticultural extension advisors, park directors and staff (federal, state, regional, and local), street tree superintendents and staff, grounds superintendents and staff (golf courses, college and school grounds, cemeteries, condominiums, retirement communities, theme parks, etc.), arboretum and botanic garden directors and staff, nursery growers and retailers.

Editorial Review

From the Back Cover

A comprehensive guide to the care of trees, this book covers all aspects of arboriculture from the fundamentals of tree growth and development to developing plant health care programs. It discusses aspects of site selection and modification including climate, and soil and water management. The book follows the tree from selection in the nursery to planting and aftercare through such routine practices as pruning, fertilization, support systems, and plant health care. Key management situations such as tree preservation, hazard assessment, and problem diagnosis are discussed in detail.

The fourth edition offers several new features that the student of arboriculture and practicing arborists will find valuable:

- Reorganization of topics to improve continuity of information
- Addition of overviews and summaries for each chapter
- Updated assessment of tree care practices such as soil amendments, mycorrhizae, and tree growth regulators
- Thorough evaluation of the benefits from trees (economic, environmental, ecological, and psychological) including examples of the most recent research on cost-benefit analysis of trees in urban areas
- Emphasis on special management situations such as structural soils, root-pavement conflicts, and remnant forests

Twenty years have past since the publication of the first edition. During that time arboriculture has experienced significant changes. Research findings; the application, training, and certification of arborists; innovations by practitioners; new and improved equipment and products; a worldwide community of professionals; and a better informed and more concerned public bode well for the future of arboriculture. Instant access to information across the Internet allows for exchange of ideas and experiences among arborists in every part of the globe.

The fourth edition of *Arboriculture* provides approaches to analyzing problems and situations and selecting the most appropriate solutions or courses of action. This is particularly important because local or regional factors require specific solutions. As in previous editions, new information and maintenance practices are evaluated and, where appropriate, current practices reassessed. The analytical approach is emphasized, assessing management needs and deciding on an appropriate solution.

The common and botanical names used generally conform to those listed in *Hortus Third* (Bailey and others, 1976) and the *Annotated Checklist of Woody Ornamental Plants of California, Oregon, and Washington* (McClintock and Leiser, 1979).

Measurements are given in metric units, followed by English equivalents in parentheses. In many situations, approximate values are accurate enough, so conversions between the two systems are rounded for simplicity.

Users Review

From reader reviews:

Cynthia Hughes:

In this 21st millennium, people become competitive in most way. By being competitive right now, people have do something to make these survives, being in the middle of often the crowded place and notice through surrounding. One thing that at times many people have underestimated that for a while is reading. Sure, by reading a guide your ability to survive boost then having chance to remain than other is high.
