

Frontiers in Offshore Geotechnics II

From CRC Press

Frontiers in Offshore Geotechnics II From CRC Press

Frontiers in Offshore Geotechnics II comprises the Proceedings of the Second International Symposium on Frontiers in Offshore Geotechnics (ISFOG), organised by the Centre for Offshore Foundation Systems (COFS) and held at the University of Western Australia (UWA), Perth from 8 – 10 November 2010. The volume addresses current and emerging challenges facing those working in offshore geotechnics, spanning construction, design and research. Keynote papers with authors from industry and academia describe the state-of-the-art of practice and theory. A further 117 peer-reviewed papers describe emerging research, new design techniques and recent case studies related to the frontiers of offshore geotechnical engineering. The themes of the papers include geohazards, gas hydrates, in situ site characterisation and pore pressure measurement, site investigation, soil characterisation, foundations for renewable energy, shallow foundations, jack-up units, piled foundations, anchoring systems, pipelines and risk and reliability. New and established design methods representing industry best practice are discussed alongside new construction technologies and emerging research ideas. *Frontiers in Offshore Geotechnics II* provides a comprehensive state-of-the-art reference for professionals and researchers in offshore, civil and maritime engineering and for soil mechanics specialists.

Editorial Review

About the Author

Susan Gourvenec is currently an Associate Professor at the Centre for Offshore Foundation Systems (COFS) in the University of Western Australia (UWA) having joined as a Research Fellow in 2001. Susan's research has spanned tunneling, foundations and retaining walls, using advanced numerical analysis, centrifuge modelling and element testing. Her recent research has led to new design approaches for offshore shallow foundation systems and anchors, tackling the effects of combined loading and uplift. This work has led to awards from the International Society of Soil Mechanics and Geotechnical Engineering (ISSMGE), the Australian and New Zealand Geomechanics Society and the International Journal of Geomechanics. Assoc. Professor Gourvenec is a member of the Shallow Foundations task group within the API Geotechnical Resource Group. She has authored more than 70 technical publications and leads the delivery of specialist courses on offshore geomechanics for industry and at Masters level within UWA. Assoc. Professor Gourvenec chaired the inaugural International Symposium on Frontiers in Offshore Geotechnics in 2005, as well as this subsequent event, and in both cases co-edited the proceedings.

David White has been a Professorial Fellow at the Centre for Offshore Foundations since 2007. His principal research areas are pipeline geotechnics and foundation engineering. He was awarded his PhD in 2002 from the University of Cambridge. He held a Lectureship in Cambridge until 2007 when he took up his current position at UWA. Professor White has authored more than 140 technical papers including 6 conference keynotes. His publications have won 5 awards, including the Telford Premium, the Bishop Medal and the BGA Prize (twice), and the Australian Academy of Science awarded him the 2010 Anton Hales Medal for distinguished research. Professor White interacts closely with industry, acting as a consultant through the Perth-based firm, Advanced Geomechanics, and he has served on the editorial boards of three journals and on two ISO standard committees (concerned with jack-up foundations and pipelines). He is Secretary of the ISSMGE's Technical Committee 104 (Geotechnical Physical Modelling).

Users Review

From reader reviews:

Belia Gillespie:

The knowledge that you get from Frontiers in Offshore Geotechnics II could be the more deep you looking the information that hide into the words the more you get interested in reading it. It doesn't mean that this book is hard to be aware of but Frontiers in Offshore Geotechnics II giving you excitement feeling of reading. The article author conveys their point in particular way that can be understood by anyone who read the item because the author of this book is well-known enough. This specific book also makes your own personal vocabulary increase well. It is therefore easy to understand then can go together with you, both in printed or e-book style are available. We recommend you for having this kind of Frontiers in Offshore Geotechnics II instantly.

Deanna Marcantel:

This book untitled *Frontiers in Offshore Geotechnics II* to be one of several books which best seller in this year, this is because when you read this book you can get a lot of benefit on it. You will easily to buy that book in the book retail outlet or you can order it by using online. The publisher on this book sells the e-book too. It makes you more easily to read this book, as you can read this book in your Smartphone. So there is no reason to you personally to past this reserve from your list.

Ethel Swafford:

The reserve with title *Frontiers in Offshore Geotechnics II* possesses a lot of information that you can discover it. You can get a lot of help after read this book. This book exist new knowledge the information that exist in this guide represented the condition of the world right now. That is important to yo7u to know how the improvement of the world. This kind of book will bring you with new era of the glowbal growth. You can read the e-book in your smart phone, so you can read this anywhere you want.

Merlin Doyle:

As a student exactly feel bored to be able to reading. If their teacher inquired them to go to the library or to make summary for some reserve, they are complained. Just small students that has reading's soul or real their interest. They just do what the teacher want, like asked to go to the library. They go to generally there but nothing reading seriously. Any students feel that examining is not important, boring and also can't see colorful photos on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore this *Frontiers in Offshore Geotechnics II* can make you feel more interested to read.
