## **Editorial Review**

### Review

'this book is worth reading ... it sits comfortably within the general zeitgeist of current work in ecology and evolution ... I highly recommend this volume. It is beautifully illustrated with pictures of the early hominids and the artefacts they produced. ... if you are interested in your past, and how your past has provided you with the symbolic tools to be a scientist, then this is the handbook for you.'

TREE, vol.12, no.9, September 1997

'it is a truly remarkable achievement and provides an invaluable resource. ... This handbook does indeed lay the foundations for increased collaborative research and will facilitate interdisciplinary teaching on cognitive evolution. ... a vast bibliographic resource ... it is sure to remain a standard work of reference for a long time'

The Times Higher Education Supplement

### From the Back Cover

Explanations and accounts of our own origins have become one of the most popular of all the areas in science that are now regularly brought into the public arena via television, lavishly illustrated books, and even cartoons. The discovery of fossils and artefacts has its own intrinsic interest, but it is the origin of our characteristically human abilities - speech, the creation of images, reading, writing-that holds the imagination.

This volume is a reference work that sets out and evaluates the basic knowledge and theory relevant to these origins of these abilities that have accumulated in the scientific literature over the last few decades. It is a compendium of and a guide to the general topics that assist in understanding human symbolic evolution.

Contributions to the volume include those from linguistics, anthropology and psychology. Primatologists and biologists have also contributed giving the reader a uniquely broad and accessible reference work.
