The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften) By Lothar Collatz

This book constitutes an attempt to present in a connected fashion some of the most important numerical methods for the solution of ordinary and partial differential equations. The field to be covered is extremely wide, and it is clear that the present treatment cannot be remotely exhaustive; in particular, for partial differential equations it has only been possible to present the basic ideas, and many of the methods developed extensively by workers in applied fields - hydrodynamics, aerodynamics, etc. -, most of which have been developed for specific problems, have had to be dismissed with little more than a reference to the literature. However, the aim of the book is not so much to reproduce these special methods, their corresponding computing schemes, etc. , as to acquaint a wide circle of engineers, physicists and mathematicians with the general methods, and to show with the aid of numerous worked examples that an idea of the quantitative behaviour of the solution of a differential equation problem can be obtained by numerical means with nothing like the trouble and labour that widespread prejudice would suggest. This prejudice may be partly due to the kind of mathematical instruction given in technical colleges and universities, in which, although the theory of differential equations is dealt with in detail, numerical methods are gone into only briefly.

Editorial Review

Users Review

From reader reviews:

Edward Baca:

Book is to be different for each and every grade. Book for children until eventually adult are different content. As you may know that book is very important for all of us. The book The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften) seemed to be making you to know about other information and of course you can take more information. It doesn't matter what advantages for you. The reserve The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften) is not only giving you considerably more new information but also for being your friend when you feel bored. You can spend your current spend time to read your guide. Try to make relationship with all the book The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften). You never sense lose out for everything if you read some books.

Edward Foland:

The publication with title The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften) contains a lot of information that you can study it. You can get a lot of help after read this book. That book exist new expertise the information that exist in this e-book represented the condition of the world at this point. That is important to you to know how the improvement of the world. This kind of book will bring you in new era of the global growth. You can read the e-book on the smart phone, so you can read the idea anywhere you want.

Leroy Ange:

You can get this The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften) by visit the bookstore or Mall. Only viewing or reviewing it could possibly to be your solve challenge if you get difficulties for the knowledge. Kinds of this reserve are various. Not only simply by written or printed and also can you enjoy this book by simply e-book. In the modern era like now, you just looking from your mobile phone and searching what your problem. Right now, choose your ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still up-date. Let's try to choose correct ways for you.

Catherine Taylor:

Reading a guide make you to get more knowledge from this. You can take knowledge and information from your book. Book is published or printed or outlined from each source that will filled update of news. With

this modern era like right now, many ways to get information are available for an individual. From media social just like newspaper, magazines, science guide, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Isn't it time to spend your spare time to open your book? Or just trying to find the The Numerical Treatment of Differential Equations (Grundlehren der mathematischen Wissenschaften) when you desired it?
