# Soft Computing: Integrating Evolutionary, Neural, and Fuzzy Systems

By Andrea Tettamanzi, Marco Tomassini

Soft Computing: Integrating Evolutionary, Neural, and Fuzzy Systems By Andrea Tettamanzi, Marco Tomassini

Soft computing encompasses various computational methodologies, which, unlike conventional algorithms, are tolerant of imprecision, uncertainty, and partial truth. Soft computing technologies offer adaptability as a characteristic feature and thus permit the tracking of a problem through a changing environment. Besides some recent developments in areas like rough sets and probabilistic networks, fuzzy logic, evolutionary algorithms, and artificial neural networks are core ingredients of soft computing, which are all bio-inspired and can easily be combined synergetically.

This book presents a well-balanced integration of fuzzy logic, evolutionary computing, and neural information processing. The three constituents are introduced to the reader systematically and brought together in differentiated combinations step by step. The text was developed from courses given by the authors and offers numerous illustrations as

Editorial Review

Review

From the reviews:

"The authors explain that soft computing is a term covering such computing methodologies which are, in some sense, tolerant of imprecision, uncertainty and partial truth. There are three of them exposed in this book, namely: fuzzy logic, evolutionary algorithms and artificial neural networks – all inspired by nature. … The book contains many examples of applications, which cover a broad spectrum: finance, medicine, robotics and others." (Jerzy Mycka, Zentralblatt MATH, Vol. 981, 2002)

"The reviewed book is intended both for undergraduate students in soft computing disciplines as well as for engineers, practitioners, and problem solvers in many areas of application. … The main theme of the reviewed book is integration and synergistic co-operation of a few soft-computing methodologies that have their roots in neural systems. … I fully agree with the authors that several techniques presented can be used sequentially to solve parts of the problem in a 'pipeline' fashion, because it … will be used increasingly." (Dr. Ing. Miroslav Svítek, Neural Network World, Vol. 12 (2), 2002)

"The book Soft Computing: Integrating Evolutionary, Neural and Fuzzy Systems provides a comprehensive introduction to the area of soft computing addressing three of the main constituents of this discipline: fuzzy logic, neural computing and evolutionary computing. … The book is primarily aimed at undergraduate students and practitioners in the field. The book is organized in a modular form which enable readers to select their own pathway through the chapters. … The academic content is well supported by informative practical examples and case studies." (Liam Maguire, Artificial Intelligence Review, Vol. 23, 2006)

Users Review

From reader reviews:

Gerald James:

The book with title Soft Computing: Integrating Evolutionary, Neural, and Fuzzy Systems includes a lot of information that you can understand it. You can get a lot of profit after read this book. That book exist new information the information that exist in this reserve represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. This specific book will bring you with new era of the internationalization. You can read the e-book in your smart phone, so you can read it anywhere you want.

Jennifer Dillon:

A lot of people always spent their very own free time to vacation or maybe go to the outside with them family or their friend. Were you aware? Many a lot of people spent they will free time just watching TV, or perhaps playing video games all day long. In order to try to find a new activity honestly, that is look different

you can read the book. It is really fun to suit your needs. If you enjoy the book that you simply read you can spent the entire day to reading a book. The book Soft Computing: Integrating Evolutionary, Neural, and Fuzzy Systems it doesn't matter what good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. In the event you did not have enough space to deliver this book you can buy the e-book. You can m0ore very easily to read this book through your smart phone. The price is not to cover but this book possesses high quality.

Ricardo Bishop:

In this particular era which is the greater individual or who has ability to do something more are more valuable than other. Do you want to become certainly one of it? It is just simple strategy to have that. What you are related is just spending your time little but quite enough to have a look at some books. One of the books in the top listing in your reading list is Soft Computing: Integrating Evolutionary, Neural, and Fuzzy Systems. This book which is qualified as The Hungry Slopes can get you closer in turning into precious person. By looking way up and review this publication you can get many advantages.

Bradley Ray:

As a college student exactly feel bored in order to reading. If their teacher inquired them to go to the library or even make summary for some reserve, they are complained. Just minor students that has reading's internal or real their leisure activity. They just do what the instructor want, like asked to the library. They go to presently there but nothing reading significantly. Any students feel that studying is not important, boring and also can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this period, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore , this Soft Computing: Integrating Evolutionary, Neural, and Fuzzy Systems can make you experience more interested to read.
